

GENERAL[®] PESTCONTROL

External Preventive Solutions

STRONG ODOR TREATMENT

General Pest Control is a basic pest control service carried out in the external areas of housing societies, commercial premises, warehouses etc. This treatment is a thorough spray treatment for entire external plinth area, all common areas like staircase, midlanding, parking lot and entire compound area of the premises. Also all the drainage chambers within the premises will be opened and a thorough spray will be done inside the chambers. The kinds of cockroaches which breed inside the drainage chambers are different from the cockroaches which dwell in the internal area of the premises. Internal areas of the premises have to be treated separately.

WOODBORER[®] SERVICE

Wood Borer Treatment

STRONG ODOR TREATMENT

When you see white powder falling from wooden furniture it is a sure sign of wood borer infestation. Most of us incorrectly think this to be a termite infestation. **Wood Borer Service** is a specialized service to control wood borer infestation. Pesticides are injected into the exit holes to provide effective treatment. However the best way to control wood borer is through preventive treatment of all wood and plywood before applying polish, paint, laminate or any other finish during renovation and interior projects.

MOSQUICEASE[®] SERVICE

Mosquito Control Solutions

LOW ODOR TREATMENT

This treatment includes spraying, misting and fogging for the control of adult mosquitos and larvaes around the entire premises. We offer this service for large housing complexes and commercial establishments.

RATCEASE[®] SERVICE

Rodent Control Solutions

Rats and Mice live around human surroundings as they find food and shelter. They multiply at fast pace and contaminate food, damage property and other valuable materials. They are carriers of diseases such as plague, leptospirosis, and rat bite fever etc. Commonly found rats are house mouse, roof rats and Indian bandicoot rat.

Ratcease Service is a systematic study of rat behavior in which combination of different methods like baits, glue pads placed in rodent boxes which are fixed around the external periphery of the premises as per the area and requirement. For internal area of the premises, products like glue traps, low dose rat baits, mechanical traps etc are used.

TERMITE FREE STRUCTURAL FOUNDATIONS :

Pre-Construction Termite Treatment

Cockroaches are the most common pest. Besides being a nuisance, they also transmit germs responsible for Cholera, Gastroenteritis, Dysentery, Typhoid, Respiratory disease and also aggravate asthma attacks. They mostly live and breed in the drainage chambers and septic tanks. They usually come out in night and walk over uncovered food, cooking utensils, Kitchen equipments, kitchen platform spreading germs responsible for various life threatening diseases. Types of cockroaches generally seen in Indian homes and commercial areas are :

German Cockroach :

They are commonly found in Indian kitchen, restaurants, food processing plants, supermarkets, Malls and warehouses.

American Cockroach :

They live and breed in subfloors, basements, sewers, manholes, drainage chambers etc.

Brown-Branded Cockroach :

They are usually found indoors. They look much like German Cockroach.

Oriental cockroach :

They are found most often in dark basements and cellars.

Ants :

Ants are a social insect that live in colonies. They swarm around left over/spilt food, drink and form trails which lead back to their nests. They cause painful bites and stings.

Advantages of Intechgel Service

- Totally Odorless / Non Messy / Environment friendly.
- No need to empty entire kitchen/premises.
- No need to close/vacate the premises after the service.
- Harmless for human being & pets.
- **Registered / Licensed / Approved** pesticides are used.

Bed bugs are small, brownish, flattened insects that feed solely on animal or human blood. It is a cosmopolitan pest usually found in human habitation. Bed bug infestation is picked up from cinema halls, hospitals, hotels, public transports. Their bite contribute to the ill health of children and adults. They cause sleepless nights.

Bugblaster Service Is a systematic  treatment which includes a thorough odorless spray to beds, bedding, curtains, furnitures and even walls.

Termites are the number one pests as they cause major structural damage to residential and commercial buildings. Most of this damage is caused by subterranean or soil nesting termites in search for food containing cellulose such as wood, paper, clothes etc. They construct pathways or mud tubes from their nest to food source. When you see the mud tubes it is a sure sign of termite infestation. Even if you don't see these signs it does not mean there are no termites around and damage goes undetected till it is too late. So when dealing with termites, PREVENTION IS BETTER THAN CURE. Our termite management service is totally odorless and very effective and supported by new generation pesticides for TERMITE CONTROL. It is a systemic and contact pesticide which spreads in all directions by a process called "Lateral Soil Movement (LSM)" ensuring effective control of termites. With the latest quality of chemicals and sophisticated application methods of DRILL-INJECT-SEAL, you will get complete peace of mind against termite problem.

We provide **TERMICEASE** treatment for internal area (**TC-1**), external area (**TC-2**), comprehensive treatment for both internal and external area (**TC-3**) and anti-termite preventive pre-construction treatment as per IS standard (**TC-4**).
